Predict Soil Health

Predicted Soil Parameters

SOC (Soil Organic Carbon)	High	1.58%
Nitrogen (N)	Medium	173.9kg/ha
Phosphorus (P)	Medium	24.4kg/ha
Potassium (K)	Low	85.7kg/ha
pH Level	Medium	7

Predict Soil Health

Predicted Soil Parameters

SOC (Soil Organic Carbon)	High	1.58%
Nitrogen (N)	Medium	173.9kg/ha
Phosphorus (P)	Medium	24.4kg/ha
Potassium (K)	Low	85.7kg/ha
pH Level	Medium	7

Recommended Crops

- Wheat (Best)
- Soybean (Best)
- Rice (Best)
- Cotton (Alternative)
- Jowar (Alternative)

About Digital SmartSoil

Our Mission

To empower farmers across Maharashtra and India with smart, accessible soil health estimation using just a smartphone photo. By combining image analysis, geolocation data, and machine learning, we aim to make soil testing affordable and instant for every farmer.

Research Background

This app is part of an ongoing PhD research project focused on digital soil analysis. Data has been collected from farms across Maharashtra, trained using MobileNetV2-based deep learning models, and validated against standard laboratory soil test results from ICAR

📖 How to Use

Step 1: Take a Photo

Take a clear photo of your soil sample or test-tube against a plain background. Natural daylight works best.

Step 2: Upload Image

Go to 'New Soil Test', select your farm, and upload the photo from your gallery.

Step 3: Get Predictions

Tap 'Predict Soil Health' and wait a few seconds. The app will analyze your image and predict SOC, N, P, K, and pH levels.

Step 4: View Recommendations

Based on predicted values, the app will suggest suitable crops for your soil type.

📸 Photo Tips

Take photos in natural sunlight for best

Natural daylight works best.

Step 2: Upload Image

Go to 'New Soil Test', select your farm, and upload the photo from your gallery.

Step 3: Get Predictions

Tap 'Predict Soil Health' and wait a few seconds. The app will analyze your image and predict SOC, N, P, K, and pH levels.

Step 4: View Recommendations

Based on predicted values, the app will suggest suitable crops for your soil type.

📸 Photo Tips

- Take photos in natural sunlight for best accuracy
- Keep camera 15-20cm from the soil sample
- Use a plain white or neutral background behind test-tubes
